

HOLLOW GROUND PLANER COMBINATION SAW BLADES

This blade has been developed and perfected for very fast and remarkably smooth cutting in any direction of the wood. It is the outstanding choice for hand feed operations where a smooth cutting combination saw is required. Its Style S tooth has extra hook to take a fast feed. Its special hollow grind provides plenty of clearance for free and easy passage through the work without collecting gum or burning. The result is more cuts between sharpenings; cuts that are so smooth that sanding can be eliminated

COMMON SIZES

Dia.	Thick (gauge)	Center Hole	Teeth	Tooth Style
10	13-16-13	5/8	70	S
12	12-15-12	1	90	S
14	11-14-11	1	100	S
16	11-14-11	1	110	S

HOLLOW GROUND MITRE, PLYWOOD AND CUT-OFF SAW BLADES

Used principally for mitering and cutting off light stock such as in cabinet and cigar box work, these blades leave a smooth, finished surface that does not require sanding. They are not recommended for heavy cutting. Hollow ground for clearance, these blades are generally furnished with style L tooth but are available with style M tooth made to order. For power feed trimming of hardwood flooring, these blades can be recommended when made to order 1 or 2 gauges thicker than the stock sizes listed. For example, the 12" blade should be ordered 11-14-11 gauge instead of 13-16-13 gauge.

COMMON SIZES

Dia.	Thick (gauge)	Center Hole	Teeth	Tooth Style	Collar
8	15-18-15	5/8	150	L, M	3-1/2"
10	14-17-14	5/8	150	L, M	4"
12	13-16-13	1	150	L, M	5"

REMANUFACTURING RIP SAW BLADES

These blades are widely used in lumber mills, maintenance shops, and woodworking plants manufacturing such products as furniture. Generally under 30 inches in diameter, furnished with Style A teeth, set and filed for clearance, they can be used on table saws, edger saws or in single or gang ripping applications, cutting boards or dimension lumber.

COMMON SIZES

Dia.	Thick (gauge)	Center Hole	Teeth	Tooth Style	Kerf
14	12	1	36	A	.165
14	14	1	36	A	.134
16	13	1	36	A	.148
16	14	1	36	A	.134
18	12	1	36	A	.165
20	13	1	36	A	.148

Alteration of Stock Items: Arbor holes can be altered at an additional cost when specified.

Ordering Non-Stock Items: Sizes and specifications other than those listed in stock can be made to order but will require special pricing, handling and extended delivery. When ordering non-stock blades include the following information: Quantity, Saw Type, Diameter Gauge, Center Hole, Pin Hole or Keyways, No. Teeth, Tooth Style, Tooth Fitting (SF or SW), R.P.M., Hand.
