

INSERTED TOOTH CUT-OFF SAW BLADES

Inserted tooth saw blades are designed for highly efficient cutting to length of large diameter logs. Heavy gauge and extra tough, these saw blades are well suited to the single saw Mobile Slasher and multiple- saw Deck Slashers found in today's paper mills. They are also the ideal blade for use on Merchandiser Machines used in modern lumber, plywood, particle board and wafer board mill complexes.

The replaceable teeth are easily changed and can be resharpened, simplifying maintenance while maintaining original saw diameter.

Inserted toothsaws are Laser Cut and Precision Milled on "State of the Art" CAD/CAM machinery.

This insures that the V grooved sockets make a Mechanically Perfect Fit Between Plate and Tooth consistently insuring tight fitting teeth.

The replaceable machined alloy steel teeth are held securely by wear resistant rivets. These saw plates are made of high quality alloy steel, heat treated in modern equipment to insure maximum hardness and toughness. This results in extended saw life and tension

holding qualities.

ORDERING INFORMATION NEEDED

- Quantity
- Diameter
- Gauge
- Centerhole
- No. of Teeth
- Tooth Style
- Pin Holes
- R.P.M.

IMPORTANT

Also include Standard tooth shoulder design. (See inside back cover)

STANDARD SIZES
